

One address for all Your IP Communications with Email, Collaboration, IM and VoIP

The award-winning CommuniGate Pro is the technology leader in converged data and voice messaging systems, providing true 99.999% uptime in a highly-scalable, standards-based software solution.

CommuniGate Pro provides a full set of features and simple administration to satisfy the needs of small and mid-sized businesses, but it also scales to multi-million user clusters, making it ideal for carrier-class ISP, wireless and cable providers and large scale universities and enterprises.

Over 10,000 customers and 125 million users daily around the world use CommuniGate Pro.

CommuniGate Pro merges security, reliability, scalability and all voice and data communications into one cluster-wide single image. The client integration to Microsoft Outlook™ provides seamless services for desktop users and the voice technologies provide mobile and IP-based phone integration.

Single Solution for all Internet Communications

Easy to administer

- Intuitive configuration and management
- WebAdmin interface and a command line interface for provisioning and automation
- Single system image
- Consolidated identity management
- Delegated services and administration

Cost-effective

- Lowest TCO
- Reliable with minimal maintenance
- Scales in size without affecting current users
- Convergence of voice and messaging reduces expenses

Optimized for performance

- Multi-threaded and multi-processor optimized
- Eliminates resource-expensive file locking
- Utilizes advanced file systems
- Multi-core optimized

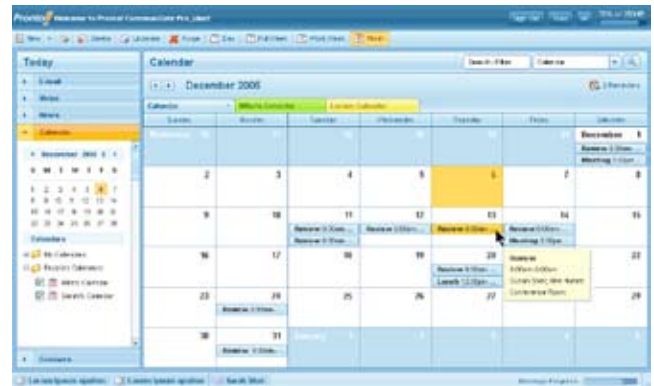

Proven reliability

- 99.999% uptime
- No single point of failure
- Active-Active clustering

Groupware and Calendaring for Collaboration

CommuniGate Pro offers integrated groupware functionality for enterprise environments, including support for email, shared folders, calendaring and group scheduling. Microsoft Outlook users can take advantage of the same advanced collaboration tools that they experience with Microsoft Exchange™. They receive email, schedule appointments, share free/busy information, and reply to meeting requests in the familiar Outlook interface. In addition, with CommuniGate Pro users can access all forms of IP Communications via one Inbox.

The multi-language WebUser Interface for webmail enables mobile users to access email, calendars, contacts, group scheduling and electronic discussions via any browser. Standards-based calendaring support of iCAL/iMIP/iTIP, WebDAV and vCal allows integration with existing shared calendar and publishing systems. CommuniGate Pro also includes Pronto! a secure and portable lightweight Flash client for IP Communications anywhere.

Pronto! Calendaring

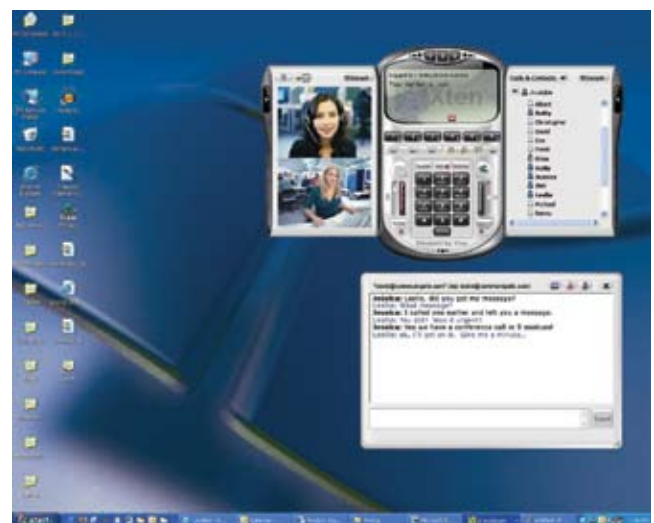

Dial Direct for VoIP Call from Microsoft Outlook

Real-Time Communications

Real-time communications are offered via the built-in SIP server for register, proxy and presence services for SIP-enabled devices. The software supports Instant Messaging (IM) via Microsoft Windows Messenger and any other SIP-based IM client, VoIP, video-conferencing and desktop applications such as whiteboarding.

With CommuniGate Pro's SIP "Make Call" feature, voice calls can be made directly from Outlook.

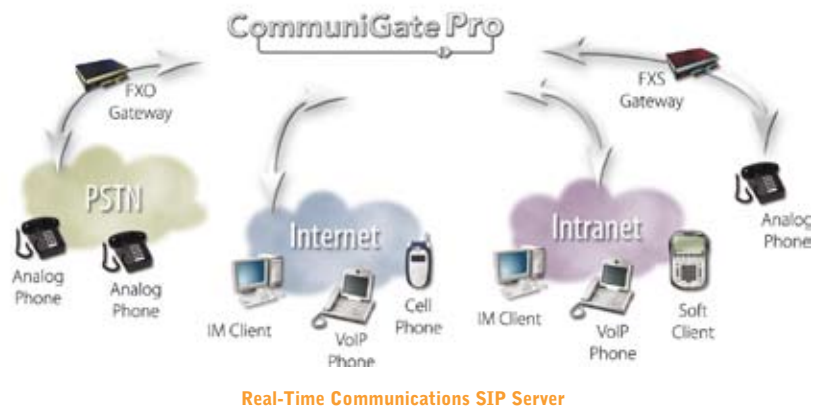

Video Conferencing & Secure Instant Messaging

Initiating a call is as easy as selecting a contact's name in your address book, and then Outlook initiates the call from your VoIP application or IP phone. A variety of SIP-enabled applications enable users to connect and communicate in real time.

Real-Time Communications SIP Server

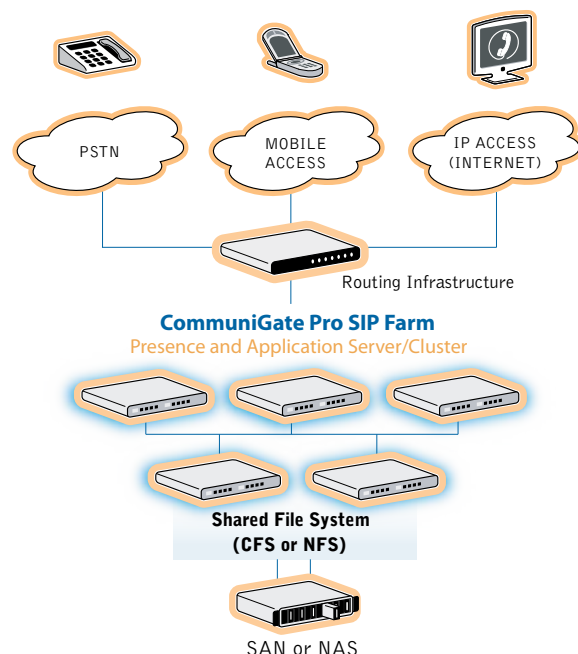

The advanced SIP infrastructure features "near-end - far-end" NAT traversal technology, SIP proxy and SIP registrar, plus a SIP presence server to manage complex client environments, buddy lists and server side configuration data. CommuniGate Pro provides a secure VoIP, instant messaging and video conferencing environment for users, no matter where they are in the world.

CommuniGate Pro also has the built-in ability to dynamically discover and adjust for firewalls, VPNs and NAT on both the client and server connections to the Internet. The multi-threaded architecture provides registry services with a capacity to handle millions of VoIP users and SIP proxy services for thousands of call signals per second.

Dynamic Clustering for Guaranteed Uptime

CommuniGate Pro's unique Dynamic Clustering functionality sets it apart from other solutions by allowing customers to support millions of accounts while providing "Five Nines" (99.999%) uptime. With the Dynamic Cluster architecture, the system remains up and running even if multiple hardware components fail, making it a fast, scalable and reliable messaging solution with cost effective growth.

A CommuniGate Pro Cluster can reside on both Network-Attached Storage (NAS) systems using NFS and

Storage-Area Network (SAN) systems. It can use either fiber or iSCSI and runs with a variety of Cluster File Systems providing massive scalability and performance options, as well as resilient architectures for Disaster Recovery and Business Continuity. SIP Farm and its unique technology provides 99.999% uptime for voice applications, proven in a benchmark supporting 10 million voice users with ease.

CommuniGate Pro Integration with Your Environment

- Microsoft Exchange™ and Active Directory™ authentication and provisioning – domain support across a combined environment
- Lotus Notes™ calendar sharing with iCAL/iMIP/iTIP
- Integrated directory with LDAP, Active Directory™, RADIUS, Kerberos, PAM and Windows - and Unix/Linux OS accounts and passwords
- Easy VoIP integration with your FXO/FXS or VoIP-PSTN gateways
- SMS/MMS message routing
- Seamless migration from Exchange™, v7-style mailboxes or any IMAP/POP server, including a 'live and transparent' migration, allowing both systems to be fully active throughout

About CommuniGate Systems

Founded in 1991 and based in Mill Valley, California, CommuniGate Systems (CGS) develops carrier-class Internet Communications software for broadband & mobile service providers, enterprises, and OEM partners worldwide. Over 125 million end users including 45 million voice customers rely upon CGS products for their voice and data communication needs. CommuniGate Systems maintains the highest customer satisfaction level in the industry and has won more awards than any other IP Communications platform. CGS provides performance, scalability, with the benchmark proven architecture that remains un-challenged in the industry. Our open development environment with simple APIs delivers extensibility with a unique clustering technology for 99.999% uptime for the most demanding application environments. CGS has over 175 members in its partner network worldwide.

Download CommuniGate Pro today and join the global initiative to help SIPify and convert nearly 2 billion email accounts to a single identity for all forms of IP Communications.
